Appendix A

Introduction

Completion of Appendix A **MANDATORY**. Please indicate your **Recycling** tonnages and costs in Table A below.

WHAT MATERIALS ARE INCLUDED?

The items below are included in Practice Greenhealth's definition of **recycling** and include items/ materials that are recycled in the traditional manner. These items are collected, reworked, and formed into new items. While not eligible to be considered in **recycling** totals, Practice Greenhealth also highly values reuse, avoided materials, and source reduction--which are given credit elsewhere in the application.

Appendix A **Recycling** and **Universal Waste** totals will be summed at the bottom of this page and will also be **automatically entered** in the Waste Section of this application.

Directions for filling out Appendix A:

- If you use **SINGLE STREAM** or commingled **recycling**, please answer **yes to Question 1**. In Question 1.a , check a box for each type of material included in your single stream program, and fill in the requested single stream **tonnage cost and rebate data** . In **Question 2** you will check a box to indicate every **other** material recycled at your facility that is NOT included in your single stream program, and provide the tonnage, cost and rebate data in the boxes below the checklist.
- If you **DO NOT USE SINGLE STREAM recycling**, answer "No" to **Question 1**, and proceed to **Question 2**, where you will check a box to indicate each type of material recycled at your facility, and provide tonnage and costs data in the boxes provided below the checklist.
- COST vs REBATE: Space is provided for you to enter **recycling** costs and rebates separately. A net cost or revenue will be calculated for all materials at the bottom of the page.
- **UNIVERSAL WASTE**: Since the definition of **Universal Waste** varies by state, **Universal Waste totals** at the bottom of the page will include items that are **considered hazardous waste if not recycled**, even if they are not technically considered **Universal Waste** in all states.
- LIQUID WASTES: For liquid wastes (such as waste solvent or vegetable oil from your kitchen), you may enter tonnage or convert gallons to tons. To calculate solvent tonnage, multiply (gallons x 6.5)/2000); for xylene multiply (gallons x 7.3)/2000); for formalin multiply (gallons x 8.5)/2000).
- C&D WASTE: **Do not enter C&D recycling data on Appendix A**. All construction and demolition debris data should be entered in Table C. on the Green Building page.

Due to international pressure on the **recycling** market, Practice Greenhealth is collecting the names of recyclers handling single-stream and individual waste/material streams. This information will help Practice Greenhealth better support regional **recycling** efforts and increase understanding of the **recycling** landscape for the healthcare sector. For every material stream selected, there will be a text box where the facility can indicate the name of the company that processes, recycles, or reuses the material. While it is important to understand which companies remove materials from the facility, please help us go one step further and capture where those collected materials are processed or recycled. (OPTIONAL)

1.* Does your facility have a **single stream/commingled recycling** program in place?
