

# Application-calculated GHG emissions data

If you are choosing to have the Partner for Change application calculate the bulk of your facility’s Greenhouse Gas (GHG) emissions this year, you must answer certain questions in order for that data to appear on the emissions table of the Climate page. This resource will help you understand where that required data is found on the Partner for Change application.

Please note that you do not need to submit the pages below for scoring in order for your GHG emissions to be calculated, the choice to spend time on the rest of the questions on these pages is still yours.

Page	Questions and tables
<b>Climate</b>	Question 2.fl on Table A1 (required), and a “Current Year” cell of your choosing on table A3 (can substitute for the data on the food page below)
<b>Greening the OR</b>	<b>For hospitals:</b> Current year columns of Tables A, B and C and question 94 <b>For outpatient facilities:</b> Current year columns of Tables A, B and C and question 95
<b>Energy</b>	“Current Year Usage” column of Table A1, question 67 and “Current Year Usage” column of Table A2 if applicable, Question 69 and “Current Year Usage” and “Units (current)” columns of tables B1 and B2 if applicable, and question 75
<b>Transportation</b>	Table A and questions 69 and 70
<b>Food (<i>optional</i>)</b>	“Amount of Food Purchased - Current Year” column of Table J and/or “Current” year column of Table O
