

UDDERLY GREEN ORGANIC COMPOST

Envision[®]
GUNDERSEN
HEALTH SYSTEM

All natural | Reduce watering
Allowable for use in organic production
Contains essential plant nutrients
Easy to use | Peat free
Excellent for use with all plants

Use Envision Udderly Green Organic Compost to develop a soil rich in organic matter that is earthworm and microbe friendly.

Plant growth starts with the roots. Adding compost improves soil structure and porosity in dense and compacted soils, creating a better plant root environment. Compost rich in organic matter is essential for enhancing soil life and improving water retention in sandy soil.

DIRECTIONS FOR USE

Topsoil

Mix one part compost with two parts existing or purchased soil and blend uniformly.

New lawns

Apply a 1-3" layer (based on soil test results) to soil and incorporate to a depth of 5-8". Apply seed, rake and water.

Existing lawns

Apply one to two bags per 1,000 square feet in the spring and fall (for best results).

Flower beds

Apply a 1-2" layer to soil and incorporate to a 6-8" depth. Plant flowers and water. Condition soil this way every year or two (soil test annually for best results).

Garden beds (food crops)

Apply a 1-2" layer to soil and till to a 6-8" depth. Reapply each year (soil test annually for best results).

Trees & shrubs

Dig a hole 2/3 the depth of the root ball and at least twice as wide. Mix one part compost with two parts soil obtained from the planting hole. Place the tree or shrub in the planting hole and apply amended soil around the root ball. Firm soil and water regularly the first growing season.

Mulching

Spread a 2-3" layer around trees, shrubs, and flowers. Avoid placing mulches in direct contact with plant trunks and stems.

Indoor and outdoor potted plants

Mix one part compost with two parts of your favorite potting soil.

APPLY ONLY AS DIRECTED

Ingredients: Composted yard, plant trimmings and plant fiber from the digestion process

1 Cubic Foot (28 liters)
